```
Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VBGF. VBGF-C or -D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and
                                                                                                                                                           Gaps

infection. The peptides are also used to modulate vacular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VeGF. VeGF-Cor. D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and

·.

characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arknopathy, hemangioma, vascularised malignant or benign tumour, post-recovery cerebrovascular accident, post-angioplasty restenosis, head, heat or cotramms, substance-induced neovascularisation of the liver, excessive hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver

```
Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
                                                                                                                                                                                                                                                                    /note= "A disulfide bond forms between residue 17 and residue 17 of an identical peptide to form a dimeric peptide"
                                                                                                                            Human; VEGF; vascular endothelial growth factor; angiogenesis;

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and peptides the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis,

neovascularisation or lymphangiogenesis in a mammal with a condition

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          a
                                                                                                                         The sequence represents a classic partylic peptide of the invention, whose 3-dimensional structure is madelled on the expose loop of human veger (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring beta.

Deta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior peptides) and a cyclic peptide with at least one amino acid deleted prior cordisation are used to interfere with angiogenesis, neovascularisation or lymphangiogenesis, neovascularisation or lymphangiogenesis.

The condition is diabetic retinopathy, psoriasis, arthropathy, cerebrovascular accident, post-angioplasty restenosis, head, heat or crauma, substance-induced neovascularisation of the liver, excessive trauma, substance-induced neovascularisation of the liver, excessive corporated angiogenic dysfunction, diabetes induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability cor brain. The peptides are also used to modulate vascular permeability accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are also used to inage blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF, VEGF-C or D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation with an anti-inflammatory agent, to treat a chronic inflammation with an anti-inflammatory agent, to treat and the control of the cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ÷
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note= "A disulfide bond forms between residue 17 and residue 1 of the sequence appearing as AAU04528, forming a dimeric peptide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                     sequence represents a dimeric bicyclic peptide of the invention,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ..

The sequence represents a dimeric bicyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human CC whose 3-dimensional structure is modelled on the expose loop of human CC whose 1-dimensional structure is modelled on the expose loop of human CC welpot is a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a cyclising the peptide by oxidising the cyclein residues. The monocyclic peptides, dimeric bicyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis.

The condition are used to interfere with angiogenesis, or evascularisation or lymphanglogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphanglogenesis.

The condition is diabetic retinopathy, psoriasis, arthropathy, caracterised by angiogenesis, neovascularisation or lymphanglogenesis.

The condition is diabetic retinopathy, psoriasis, arthropathy, carebovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition of machines and lymphatic contamilation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain The mammal has a condition described and lymphatic or brain. The peptides are used to inmeries and lymphaters.
                                                                                                                                                                                                                           Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        with at least one biological activity induced by VEGF, VEGF-C or -D and are also used in combination with an anti-inflammatory agent, to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    vasculature. The monomeric and bicyclic peptides are used to interfere

VEGF based monocyclic peptide 14.

26-SEP-2001 (first entry)

13 /note= "This bond cyclises the peptide"

Location/Qualifiers

Disulfide-bond

Synthetic

WO200152875-A1 26-JUL-2001

```
Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
       /note= "A disulfide bond forms between residue 17 and residue 17 of an identical peptide to form a dimeric peptide."
/note= "This bond cyclises the peptide"
                                                                                                                                           Cendron A;

```
The sequence represents a dimeric bicyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human voice 3-dimensional structure is modelled on the expose loop of human version (version version of period of producing a monomeric monocyclic peptide by a measuring betactor beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis.

CC peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis.

CC peptides) and a cyclic peptide with a least one amino acid deleted prior characterised by angiogenesis, neovascularisation or lymphangiogenesis.

CC haracterised by angiogenesis, neovascularisation or lymphangiogenesis.

CC characterised by angiogenesis, neovascularisation or lymphangiogenesis.

CC crawma, substance-induced neovascularisation of the liver, excessive hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal large are used to image blood vessels and lymphatic or brain. The peptides are used to image blood vessels and lymphatic or vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF, VEGF-C or D and contain inflammation, especially rheumatoid arthritis, psoriasis and althritis, and and activity phenesus of contains and and activity induced are contained and and activity induced are contained and activity induced 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .;

The sequence trappescents a micrometric monocyclic peptiae of the invention, whose 3-dimensional structure is modelled on the expose loop of human veget (vascular endothelial growth factor). The invention relates to a method of producing a monometric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclisming the peptide by oxidiasing the growth factor protein and cyclisming the peptide by oxidiasing the separations. The monocyclic peptides, and a cyclic peptide with at least one amino acid deleted prior cyclisation are used to interfere with angiogenesis, concavacularisation or lymphangiogenesis, concaracterised by angiogenesis, neovascularisation or lymphangiogenesis, or cyclisation are used to interfere with angiogenesis, condition is diabetic retinopathy, psoriamis, arthropathy. The condition is diabetic retinopathy, psoriamis, arthropathy cerebrovascular accident, post-angioplasty restenosis, head, heat or cordition is diabetic retinopathy, psoriamis, and hear or cold tramma, substance-induced neovascularisation of the liver, excessive cordinated angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability or brain. The peptides are used to image blood vessels and lymphatic vasculation in peripheral limbs or in lumps, peritoned loving and accumulation in peripheral activity induced by VBGF, VBGF-C or D and a chronic inflammation, especially rheumatoid arthritis, psoriasis and accumulation with an anti-inflammatory agent, to treat a condition inflammation with an anti-inflammatory agent, to treat a condition with an anti-inflammator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence represents a monomeric monocyclic peptide of the invention,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 61; DB 4; Length 13;

```
Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
                                                                                                                                                                                                                                   /note= "A disulfide bond forms between residue 17 and residue 17 of an identical peptide to form a dimeric peptide"
                                                                                                                                 Human; VEGF; vascular endothelial growth factor; angiogenesis;

dysfunction, diabetes induced neovascular sequelae, hypertension induced residues. The Begunicar Expressions a dimerric bioyello peptide by the management of the superaction, whose 3-dimensional structure is anotabiled on the expose to the invention, whose 3-dimensional structure is monografic peptide by a measuring beta-carbon separation distances on opposite antiparable strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides by oxidising the cysteine residues. The monocyclic peptides by oxidising the cyclising the peptide with at least one amino acid deleted prior peptides, dimerric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior peptides) and a cyclic peptide with a least one amino acid deleted prior cyclisation are used to interfere with angiogenesis.

CC cyclisation are used to interfere with angiogenesis.

CC cyclisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis.

CC cyclisation is diabetic retinopathy, psoriasis, arthropathy, corrections is diabetic retinopathy, psoriasis, arthropathy, corrections and angiogenesis and a condition, diabetes induced neovascular sequelac, head, heat or cord trauma, substance-induced neovascularisation of the liver, excessive corpusation. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to inage blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere The sequence represents a dimeric bicyclic peptide of the invention, Example 26; Page 49; 102pp; English.

A human cell line stably expressing vascular endothelial growth factor D, useful for treating melanomas or tumors expressing ${\tt VBGF-D}$.

Claim 6; Page 72; 79pp; English.

The present sequence represents human vascular endothelial growth factor (VBGF)-D. The specification describes a human cell line which stably expresses VBGF-D, or fragments/analogues having VBGF-D biological activity. VBGF-D antagonists, e.g. antisense nucleic acids or triplex DNA, VBGF-D antagonists, e.g. antisense nucleic acids or triplex useful for the treatment or alleviation of malignant melanomas, tumours useful for the treatment or alleviation of malignant melanomas, tumours vEGF-D can be administered to enhance the acceptance and/or healing of skin grafts or to stimulate the healing of a surgical or traumatic wound to the skin. Lymphanglogenesis stimulating amounts of VBGF-D can be used to treat scleroderma. Vascularisation stimulating amounts of VBGF-D are used to treat anhydrotic ectodermal dysplasia. VBGF-D

ö
antibodies are useful for detecting tumours expressing VEGF-D. Fully-processed VEGF-D can be used to stimulate at least one VEGF-D bioactivity chosen from endothelial cell proliferation, migration, survival and differentiation and lymphangiogenesis without inducing vascular permeability

Sequence 18, Application US/09761636A

Patent No. US20020065218A1

GENERAL INFORMATION:

APPLICANT: ACHEN, Marc

APPLICANT: ATCKER, Steven

APPLICANT: TAGKER, Richard

APPLICANT: CENDRON, Angela

TITLE OF INVENTION: VEGF-D/VEGF-C/VEGF PEPTIDOMIMETIC INHIBITOR

FILE REFERENCE: 1064/48505 Achen et al

CURRENT APPLICATION NUMBER: US, 60/1761, 636A

PRIOR APPLICATION NUMBER: US, 60/176, 293

PRIOR PLING DATE: 2000-01-18

PRIOR PLING DATE: 2000-01-18

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             USS-08-875-811-2

SEQUENCE 2, Application US/08875811

Patent No. 6045710.

GENERAL INFORMATION:

APPLICANT: Newton, Dianne L.

APPLICANT: Modawer, Alexander

TITLE OF INVENTION: Recombinant Ribonuclease Proteins

NUMBER OF SEQUENCES: 64

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                    SOFTWARE: Patentin Release #1.0, Version #1.25

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

    Virol. 68:84-92(1994).
    FUNCTION: INDUCES ENDOTHELIAL PROLIFERATION.
    SUBUNIT: Homodimer; disulfide-linked (By similarity).
    SIMILARITY: Belongs to the PDGF/VEGF growth factor family.

                                                                                                                                                                                                                                                                                                                                                                                                                                Score 40; DB 1; Length 326;

R. Tactor (VEGP) in the ovine corpus luteum.";

J. Reprod. Fertil. 108157-165 (1996).

CC chock factor active in angiogenesis, vasculogenesis and endothelial cell growth It induces endothelial cell growth. It induces endothelial cell migration, inhibits apoptosis, and proliferation, promotes cell migration, inhibits apoptosis, and conditionabilization of blood vessels. It binds to the profferal promotes permeabilization of blood vessels. It binds to the UGFRI/Flt-1 and VEGFRI/Kdr receptors and to heparan sulfate and heparin (By similarity).

CC SUBUNIT: Homodimer; disulfide-linked. Also found as heterodimer CC with PIGF (By similarity).

CC SIMILARITY: Belongs to the PDGF/VEGF growth factor family.
                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This SWISS-PROT entry is copyright. Ppituitary follicular cells secrete a novel heparin-binding growth factor specific for vascular endothelial cells.";
Biochem. Biophys. Res. Commun. 161:861-8861(989).
-: FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell promite cell migration, inhibits apportosis, and induces permeabilization of blood vessels. It binds to the VEGFRI/Fit-1 and VEGFRI/Kdr receptors and to heparan sulfate and heparin (By.similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               with PIGF (By similarity). SubCELLULLAR LOCATION: Secreted but remains associated to cells or to the extracellular matrix unless released by heparin (By

RAY RECEPTIVE SPECIFICITY.

RAY RECEPTIVE SPECIFICITY.

RAY BEDINDE-21276411; PubMed=11279005;

Raidwin M.E., Catimel B., Nice B.C., Roufail S., Hall N.E.,

Steevers K.L., Karkkainen M.J., Alitalo K., Stacker S.A., Achen M.G.;

RT actor-d is different in mouse and man.";

RI factor-d is different in mouse and man.";

Biol. Chem. 276:19166-19171(2001).

CC -!- FUNCTION: Growth factor active in angiogenesis, lymphangiogenesis and endothelial cell growth, stimulating their proliferation and underthal also has effects on the permeability of blood vessels. May function in the formation of the venous and lymphatic migration and also has effects on the permeability of blood vessels. May function in the formation of the venous and lymphatic coff differentiated lymphatic endothelium in adults. Binds and activates VEGFR-3 (FIE4) receptor.

CC of differentiated lymphatic endothelium in adults. Binds and activates VEGFR-3 (FIE4) receptor.

CC of differentiated lymphatic endothelium in adults. Binds and activates VEGFR-3 (FIE4) receptor.

CC of differentiated lymphatic endothelium in adults. Binds and activates SPECIFICITY: Highly expressed in fetal and adult lung.

CC of differentiated lymphatic endothelium in deveral body structures and organs of the embryo such as limb buds,

CC of specificity of ganglion, teeth, heart, anterior pituitary as well as countied ganglion, teeth, heart, anterior pituitary as well as vertebral column.

C1 INDUCTION: By the transcription factor c-fos.

C2 of variety of processed secreted forms with increased activity toward variety of processed secreted forms with increased activity toward linked by disulfide bonds before secretion. The fully processed control by non-covalent interactions (By similarity).

C1 inked by disulfide bonds before secretions (By similarity).

C2 in SIMILARITY: Belongs to the PDGFVUSF growth factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. -!- CATALYTIC ACTIVITY: RH + reduced flavoprotein + O(2) = ROH + oxidized flavoprotein + H(2)O.
-!- SUBCELLULAR LOCATION: Membrane-bound. Endoplasmic reticulum.
-!- SUBLIBARITY: Belongs to the cytochrome P450 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

CC "I- FUNCTION: THIS ENZYME METABOLIZES ARACHIDONIC ACID PREDOMINANTLY CC AND 9, 9-EPOXYEICOSATRIENDIC ACIDS (EET). IT ALGO ACIS AS AN OMEGA-CT AND 9, 9-EPOXYEICOSATRIENDIC ACID (19-OH-AA).

CC "I- HYDROXYLASE BY METABOLIZING ARACHIDONIC ACID TO 19-CATALYTIC ACITUTY: RH + reduced flavoprotein + 0(2) = ROH + coxidized flavoprotein + H120.

CC "I- SUBCELIULAR LOCATION: Membrane-bound. Endoplasmic reticulum.

CC "I ISSUE SPECIFICITY: ABUNDANTLY EXPRESSED IN HEART AND LIVER.

CC "I- TISSUE SPECIFICITY: ABUNDANTLY EXPRESSED IN HEART AND LIVER.

CC "I- SIMILARITY: Belongs to the cytochrome P450 family.

WPI; 2001-442248/47

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human vEGFD (vascular endothelial growth factor). The invention relates to method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a

WPI; 2001-442248/47.

```
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptides by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis.

CC to cyclisation are used to interfere with angiogenesis.

CC haracterised by angiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis.

CC The condition is diabetic retinopathy, psoriasis, arthropathy, cerebrovascular accident, post-angioplasty restenosis, head, heat or cold crauma, substance-induced neovascularisation of the liver, excessive crauma, substance-induced neovascular sequelae, hypertension induced neovascular sequelae, nor chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to inage blood vessels and lymphatic or brain. The mentioneric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF. VEGF-C or -D and are also used in combination with an anti-inflammatory agent, to treat a signal control or inflammation, especially rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   _note= "A disulfide bond forms between residue 1 and residue 1 of an identical peptide to form a dimeric peptide, or between residue 1 and residue 17 of the sequence appearing as AAU04527 also forming a dimeric

The sequence represents a dimeric bicyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human vEGFD (vascular endothelial growth factor). The invention relates to a vEGFD (vascular endothelial growth factor). The invention relates to a vEGFD (vascular endothelial growth factor). The invention relates to a beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptides (comprising 2 linked monocyclic cyclisation are used to interfere with angiogenesis, a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis.

The condition is diabetic retinopathy, psoriasis, arthropathy.

The condition is diabetic retinopathy, psoriasis, nead, heat or cold creebrovascular accident, post-angioplasty restenosis, head, heat or cold creebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive controne-related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver correctives of the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, corrective the mammal has a condition characterised by fluid arcumulation in peripheral limbs or in lungs, being being and lymphalic corrective and bicyclic peptides are used to incede are used to incede are used to incede and bicyclic peptides are used to incede are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially returned arthritis, psoriasis and

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues

Example 1; Page 89; 102pp; English.

The sequence represents Human VEGF-D (vascular endothelial growth factor)

a mino acids Val101-PR0186. The sequence is used in a method of producing camino acids Val101-PR0186. The sequence is used in a method of producing distances on opposite antiparallel strands of a peptide loop fragment confirm an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric by oxidising the cysteine residues. The monocyclic peptides dimeric confirming a linked monocyclic peptides, dimeric peptide with at least one amino acid deleted prior to cyclisation are consecuted to interfere with angiogenesis. The condition are lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy psoriasis, arthropathy, hemangioma, vascularised condition is manignant or benign tumour, post-recovery cerebrovascular accident, post-recovery carebrovascular accident, post-recovery carebrovascular accident, post-neovascular sequelae, or chronic liver infection. The peptides are also condition characterised by fluid accommunial has a condition characterised by fluid accumulation in peripheral limbs or in climage blood vessels and lymphanic vasculature. The monomeric and bicyclic condition characterises with a past one bicker one in specifies are used to media the maning and picyclic condition characterise with a place of the maning and picyclic condition characterise with a place of the maning and picyclic condition characterise with a place of the maning and picyclic condition characterise with a place of the maning and picyclic condition characterise with a place of the maning and picyclic conditions and picyclic condition characterise with a place of the page of the maning and picyclic condition characterise with a place when the page of the place when the page of the maning and picyclic condition characterised by fluid accumulation in peripheral limbs. peptides are used to interfere with at least one biological activity induced by VEGF, VEGF-C or -D and are also used in combination with santi-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and diabetic retinopathy

```
This sequence represents a 109 amino acid truncated human VEGF-D
(vascular endothelial growth factor D), lacking both the N- and C-
(vascular endothelial growth factor D), lacking both the N- and C-
terminal regions. The invention relates to a monoclonal antibody, or
fragments thereof, which is specifically reactive with the truncated
invention interferes with the binding of VEGF-D to the VEGF receptors
invention interferes with the binding of VEGF-D to the VEGF receptors
CVEGFR-3, but does not interfere with the binding of VEGF to
these receptors and additionally is not reactive with VEGF-C. The
antibody may be used to treat disorders associated with vascular
continuous proposesis, neovascularisation and endothelial cell
intropathies. The antibody may also be used to treat fluid accumulation
carthropathies. The antibody may also be used to treat fluid accumulation
in the heart and/or lung via modulation of vascular permeability. It may
additionally be used to detect VEGF-D and may be used to image lymphatic
                                                                                                                                                                                                                                                               Novel compositions comprising antibodies reactive to vascular endothelial growth factor-D, useful for treating, e.g. angiogenesis, lymphogiogenesis and neovascularization disorders.

The specification describes a human cell line which stably expresses VEGF-D, or fragments/analogues having VEGF-D biological cativity. VEGF-D arragonists, e.g. antisense nucleic acids or triplex activity. VEGF-D arragonists, e.g. antishoses nucleic acids or triplex useful for the treatment or alleviation of malignant melanomas, tumours or useful for the treatment or alleviation of malignant melanomas, tumours or vegF-D can be administered to enhangingenesis stimulating amounts of skin grafts or to stimulate to enhance the acceptance and/or healing of skin grafts or to stimulate to enhance the acceptance and/or healing of to the skin. Lymphangiogenesis stimulating amounts of to treat lymphangiogenesis stimulating amounts of to treat suped to treat soleroderma. Vascularisation stimulating amounts of VEGF-D can be used to treat anhydrotic ectodermal dysplasia. VEGF-D corresponders are useful for detecting tumours expressing VEGF-D brulty-corresped WEGF-D can be used to stimulate at least one VEGF-D broactivity chosen from endothelial cell proliferation, migration, survival and differentiation and lymphangiogenesis without inducing vascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .;

This invention describes a novel single-chain dimeric polypeptide which binds to extracellular ligand-binding domain of vascular endothelial cycopy that factor (VEGF) type 2 receptor (KDR) or VEGF type 3 receptor (Flt-4). The polypeptide of the invention comprises two receptor-binding sites of which one is capable of binding to a ligand-binding domain of the receptor, and at least one monomer of the dimeric domain of the receptor, and at least one monomer of the dimeric colypeptide is derived from VEGF-C or VEGF-C), where the polypeptide of cativating the receptor. The polypeptide of the invention is useful for preparing a medicament for preparing or treating or treating a disease or condition involving concreased signal transduction from, or an increased activation of a VEGF-C increased signal transduction from, or an increased activation of a VEGF-C type 2 or type 3 receptor e.g. for inhibiting anglogenesis or condition involving companies of the invention of a VEGF-D monomer which can be modified and used in the construction of a VEGF-D was a described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .

Location/Qualifiers

```
New endothelial growth factor polypeptide and polynucleotides, useful for diagnosing, preventing, and treating cancer and other conditions or diseases involving angiogenesis and cell proliferation.
                 /note= "Encoded by TAA, an in frame stop codon which interrupts the coding region as shown in Figure 1A-B. This site is the end of the protein sequence represented in SEQ ID 1 of the Sequence listing" 282. 287 /note= "Region not represented in SEQ ID 1 of the Sequence Listing"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel human endothelial growth factor polypeptide which has cytostatic activity. The polypeptide and its encoding polymucleotide are useful in the diagnosis, prevention, and treatment of cancer and other conditions or diseases involving angiogenesis and cell proliferation. NVR may also be used to promote revascularisation following traumatic amputation and surgical reconstruction or added to a tissue culture to promote vasculogenesis in tissues for autologous or heterologous transplant. Antagonists or this inhibitors of NVR may be used to suppress or prevent angiogenesis and brain, breast, intestine, kidney, lung, ovary, pancreas, prostate or uterus. The products of the invention can be used for gene therapy. This sequence represents the human NVR protein described in the disclosure of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          vascular endothelial growth factor; VEGF-D; angiogenesis; modification; acceleration; wound healing; tissue; organ; transplants; collateral circulation; infarction; arterial stenosis; coronary artery disease; inhibition; cancer; treatment; diabetic retinopathy; lung disorders; blood circulation; gaseous exchange; chronic obstructive airway disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                intestinal malabsorptive syndrome; biopsy; metastatic risk; detection;

This sequence is vascular endothelial growth factor-D (VEGF-D), which is an angiogenic protein of the invention. The angiogenic proteins and the DNA sequences encoding them, are used to prevent, treat or ameliotate of disease and to detect diseases, or susceptibility, by detecting mutations or the presence or amount of angiogenic protein expression. Particularly cor the presence or amount of angiogenic protein expression. Particularly cor they are used to stimulate wound healing, growth of damaged bone and disease, critical limb ischaemia or coronary disease. Antagonists of the sequences are used to inhibit angiogenesis in tumours and to treat sequences are used to inhibit angiogenesis in tumours and to treat inflammation (where associated with increased vascular permeability), inflammation can expend (lymphangiogenesis. The proteins are also also useful for stimulating (lymphangiogenesis. The proteins are also and to raise antibodies. The antibodies are useful as therapeutic agents) cand to raise antibodies. The antibodies are useful as therapeutic or in vivo or in vitro diagnosis (including imaging) or for therapy correcting immunotyping of calls, e.g. for detection minimal residual disease or immunotyping of calls, e.g. for detection minimal residual disease or immunotyping of calls, e.g. for detection a very minimal residual disease or immunotyping be useful for treating a very wide range of other the antibodies and a very wide range of other the antibodies. The antibodies are useful for treating a very wide range of other the antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disorders, e.g. autoimmune diseases; allergy; cancer; infectious diseases (viral, bacterial, fungal or parasitic); neurodegeneration, also as chemotactic agents or for stimulating regeneration of the nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              100.0%; Score 46; DB 4; Length 325; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
The sequence is that of human breast vascular endothelial growth factor D (VEGF-D). VEGF-D can be used for e.g. acceleration of angiogenesis in wound healing, tissue or organ transplantation, or to establish collateral circulation in tissue inferction or arterial stenosis, such as coronary artery disease, and inhibition of angiogenesis in the treatment of concer or of diabetic retinopathy. It can also be used in the creatment of lung disorders to improve blood circulation in the lungs and the blood stream or to improve blood circulation to the heart and 02 gas permeability in cases of cardiac insufficiency, to improve blood flow and gaseous exchange in che intestinal tract. Quantitation of VEGF-D in cancer blopsy in the intestinal tract. Quantitation of VEGF-D in cancer blopsy specimens may be useful as an indicator of future metastatic risk.

Antagonists can be used for treating e.g. conditions such as congestive heart failure, involving accumulations of fluid in the lung resulting from increases in vascular permeability. The products can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated vascular endothelial growth factor-D - used to develop products for use in e.g. modifying angiogenesis or treating lung, heart or intestinal disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ..

The present sequence represents a human zvegf2 growth factor encoded by the zvegf2 cDNA which was isolated from a human heart cDNA library.

Tvegf2 protein in a dimeric form acts as a mitogen for fibroblasts or smooth muscle cells. zvegf2 is claimed to be useful for stimulating the revascularisation of tissue or the re-endothelialisation of vascular clasue. zvegf2 is particularly claimed to be useful for the treatment of full-thickness skin wounds, including venous stasis ulcers and diabetic claimed achesives for promoting revascularisation of the healing tissue. Antagonists against zvegf2 can be used to block its mitogenic, chemotactic and angiogenic effects. The antagonists may therefore be useful for reducing growth of solid tumours by inhibiting neovascularisation of the developing tumour or by directly blocking tumour cell growth, in the treatment of diabetic retinopathy, psoriasis, arthritis, and scleroderma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                vascular endothelial growth factor; VEGF-D; angiogenesis; modification;
                                                                                                                                                                                                                                                                                                                                                                                                     New isolated vascular endothelial growth factor - used to develop products for treating e.g. wounds, burns, myocardial infarction, tpsoriasis, arthritis, restenosis or organ transplants.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents human vascular endothelial growth factor D (VEGF-D). The VEGF-D protein, compounds and antibodies, which can bind the protein, may be useful in, e.g. gene therapy and in treatment of inflammation and oedema. Vectors, containing the VEGF-D DNA, and VEGF-D DNA sequences may be used for screening for the compounds which bind to the VEGF-D protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human zvegf2 growth factor; mitogen; fibroblast; smooth muscle cell; venous stasis ulcer; diabetic ulcer; skin wound; chemotactic effect; angiogenic effect; tumour; diabetic retinopathy; psoriasis; arthritis;

19-JAN-2001 (first entry)

Human VEGD protein.

```
The sequence is that of human lung vascular endothelial growth factor D (VEGF-D). VEGF-D can be used for e.g. acceleration of angiogenesis in wound healing, tissue or organ transplantation, or to establish collateral circulation in tissue inferction or arterial stenosis, such as collateral circulation in tissue inferction or arterial stenosis, such as coronary artery disease, and inhibition of angiogenesis in the treatment of coronary artery disease, and inhibition of angiogenesis in the treatment of lung disorders to improve blood circulation in the lungs and/or gaseous exchange between the lungs and the blood stream or to improve blood circulation in the lungs and the blood stream or to cimcrove blood circulation to the heart and 02 gas permeability in cases of cardiac insufficiency, to improve blood flow and gaseous exchange in chronic obstructive airway disease, or to treat malabsorptive syndromes in the intestinal tract. Quantitation of VEGF-D in cancer bloops, specimens may be useful as an indicator of future metastatic risk. Antagonists can be used for treating e.g. conditions such as congestive heart failure, involving accumulations of fluid in the lung resulting from increases in vascular permeability. The products can also be used for treating e.g. conditions such as congestive from increases in vascular permeability. The products can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             vascular endothelial growth factor-D - used to developuse in e.g. modifying angiogenesis or treating lung, heart
acceleration, wound healing; tissue; organ; transplants; collateral circulation; infarction; arterial stemosis; coronary artery disease; inhibition; cancer; treatment; diabetic retinopathy; lung disorders; blood circulation; gaseous exchange; chronic obstructive airway disease; intestinal malabsorptive syndrome; biopsy; metastatic risk; detection; diagnosis; congestive heart failure.

This invention describes a novel vascular endothelial growth factor-X (VEGF-X) protein (IIa) and its encoding polynucleotide (IIa) which has unlinerary, cytostatic, antirheumatic, antiarthritic, antipsoriatic and antidabetic activity and actes as an angiogenesis and vascularization controlled antidabetic activity and actes as an angiogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ to preparing medicaments for treating wounds such as dermal ulcers, for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair by promoting angiogenic activity or vascularization. This sequence represents the human VEGD protein used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 354;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0; Indels

The patent discloses a method to treat neoplastic disease characterised by expression of fms-like tyrosine kinase 4 (Flt4) receptor (also referred as vascular endothelial growth factor receptor-3, VEGFR-3) in method involves administering a compound that inhibits binding of a ligand to Flt4 thereby inhibiting Flt4 mediated proliferation of vascular condothelial cells. The compound is useful for treating neoplastic disease such as breast carcinomas, squamous cell carcinomas, lymphomas, melanomas condothelial cells. The compound is useful for treating neoplastic disease and sarcomas. Flt4 receptor tyrosine kinase binding compounds can be used for manufacturing medicament useful for diagnostic screening, imaging and streatment of malignancies characterised by Flt4 expressing blood cells. The Flt4 gene maps to chromosomal region 535 and is expressed as 5.8 kb cand 4.5 kb mRNAs which differ in their 3 sequences and are confident of class III receptor tyrosine kinases (RTKS). It is used as a confident for tumour imaging and anti-tumour therapy. The present sequence is a human prepro-vascular endothelial growth factor D (VEGF-D), a compound a recombinantly matured VEGF-D and VEGFR-3 receptors and associate as non-covalently linked dimers
